

K-30 pulsFOG®

K-30 pulsFOG®

The Dramm K-30 PulsFOG quickly applies chemical solutions as a fog. Able to treat up to 50,000 square feet with one tankful of solution in as little as 15 minutes, the K-30 will propel the fog up to 220 feet from the operator. The PulsFOG is great for the application of insecticides, fungicides, disinfectants, foliar fertilizers and for frost protection.

The K-30 is available in two versions: a standard model and an oil model. Standard is used for regular chemical solutions that are water-based and not heat-sensitive. The Oil version is for the application of flammable liq-

uids. Heat sensitive products should not be used with either version. Dramm offers other models in a BIO version for these applications.

The fast-fogging method allows for very quick application from a distance, reducing labor and chemical exposure.

PulsFOG units usually require the addition of a carrier solution added to the water and chemical mixture for best operation. Contact Dramm for the proper solution for your needs.

Specifications

Tank capacity - 10 liter

Fuel capacity - 2 liter

Power - 6V (4: 1.5V D batteries)

Force - 101 hp

Output - 10 liters/15 min

Distance propelled VKII/NF - 220 ft

Weight empty - 25 lbs
